

Thursday 26th March Use a number line to find the unknown number in a number sentence.

First solve the calculation, then write the inverse (change + to - or - to +)

e.g. $15 + \underline{3} = 18$ \longrightarrow $18 - 15 = \underline{3}$

$11 + \underline{\quad} = 15$ \longrightarrow _____

$\underline{\quad} + 6 = 36$ \longrightarrow _____

$\underline{\quad} - 20 = 15$ \longrightarrow _____

$\underline{\quad} - 30 = 20$ \longrightarrow _____

$\underline{\quad} - 20 = 14$ \longrightarrow _____

$\underline{\quad} - 14 = 14$ \longrightarrow _____

Challenge:

e.g. $6 \times \underline{2} = 12$ \longrightarrow $12 \div \underline{2} = 6$

$4 \times \underline{\quad} = 8$ \longrightarrow _____

$3 \times \underline{\quad} = 15$ \longrightarrow _____

$20 \div \underline{\quad} = 4$ \longrightarrow _____
